AlbumPro.

The future of modern AlbumDesign has begun. **AlbumPro is an extension to Adobe InDesign®** and Adobe Bridge® to ease and speed up the workflow when creating wedding albums, photo-books, thank-you-cards and more.

AlbumPro 2 - Installation Guide

■ AlbumPro 2 comes with an installation script that will copy all files to the correct target directory.

These are the steps to proceed with the setup script.

1. Download AlbumPro 2 from www.album-pro.com

2. Extract the ZIP File to your **DESKTOP**.

As a result you have the following structure on your desktop:

Destop

   |- AlbumPro_V2

      |- AlbumPro

      |- Bridge

      |- Indesign

3. Start Adobe InDesign and create a new document. (size does not matter)

4. Go to the folder AlbumPro_V2 and start the **Install_AlbumPro.jsx** script wtth a double click.

5. Once the Setup is running, you ll get a notification if you want to run a script from an unknow source.
   Click **Yes** to proceed.

6. In InDesign you will get another message that shows the foldername where the sourcefiles are located.
   Click **OK** to proceed.

7. Once the Setup is finished you get a final notification to restart Adobe InDesign and Bridge.

8. As a final step you need to add the library with the templates to InDesign.
   Move to the follwing folder on your system and double click on the .indl file.
   Mac: /Users/##USERNAME##/Library/Application Support/AlbumPro
   PC: C:\Users\##USERNAME##\AppData\Roaming\AlbumPro

9. In InDesign you should see a new menu called **AlbumPro**.
   In Bridge you should see **Template Selector** in the Tools Menu

If you do not see this menus, something went wrong. Please proceed on the next page.

🟥 If you had to continue to this page, something went wrong with the automated installation.

Don't worry. All you need to do is to copy a couple of files.

1. Download AlbumPro 2 from www.album-pro.com
2. Extract the ZIP File to your **DESKTOP**.

   As a result you have the following structure on your desktop:

   Destop
   |- AlbumPro_V2
   |- AlbumPro
   |- Bridge
   |- Indesign

3. Copy the Folder AlbumPro (including all subfolders) from the source to the following target directory

   Mac: /Users/##USERNAME##/Library/Application Support/AlbumPro

   PC: C:\Users\##USERNAME##\AppData\Roaming\AlbumPro

4. Copy the File **analyze_selected_imgs.jsxbin** from the Folder Bridge to the following target directory

   Mac: /Users/##USERNAME##/Library/Application Support/Adobe/Bridge CS#(Version)/Startup Scripts

   PC: C:\Users\##USERNAME##\AppData\Roaming\Adobe\Bridge CS#(Version)\Startup Scripts

5. Copy the content of the Folder InDesign (including all subfolders) from the source to the following target directory

   Mac: /Users/##USERNAME##/Library/Preferences/Adobe InDesign/Version (version)/(language)/Scripts

   PC: C:\Users\##USERNAME##\AppData\Roaming\Adobe\InDesign\Version (version)\(language)\Scripts

6. As a final step you need to add the library with the templates to InDesign.

   Move to the follwing folder on your system and double click on the .indl file.

   Mac: /Users/##USERNAME##/Library/Application Support/AlbumPro

   PC: C:\Users\##USERNAME##\AppData\Roaming\AlbumPro

7. In InDesign you should see a new menu called **AlbumPro**.

   In Bridge you should see **Template Selector** in the Tools Menu

If you have any question about the installation or the usage of AlbumPro 2, send me an email at support@album-pro.com or reach me via skype (JuMayr).
